

VTEL Announces Cost-Effective, Entry-Level H.323 Multipoint Conferencing Unit

RADVISION To Supply IP-Centric MCU For Easy Integration Into Enterprise

AUSTIN, Texas and GLEN ROCK, New Jersey (November 12, 2002) – VTEL Corporation, a leading manufacturer of PC-integrated videoconferencing systems, and RADVISION (NASDAQ: RVSN), a leading provider of videoconferencing infrastructure solutions, today announced that the two companies have signed a multiunit license agreement wherein VTEL will market a multipoint conferencing unit (MCU) from RADVISION. The MCU VI provides an unparalleled cost-effective, feature-rich MCU designed for small enterprises that need to connect a limited number of videoconferencing endpoints. MCUs allow three or more locations to join together in the same videoconference. The new MCU VI, based on RADVISION technology and customized for VTEL, is available through RADVISION.

The VTEL MCU VI will allow up to six videoconferencing endpoints, each operating at 384 Kbps, to connect in a single videoconference. The product includes content protection capability (in which the video from four locations appears on the same screen), a Gatekeeper, and a built-in audio transcoder.

“VTEL is the world leader in deploying IP-centric video networks for educational institutions and corporate enterprises, and our customers told us that they need a powerful multipoint MCU,” said Bob Swem, VTEL President and CEO. “In looking for a low-cost platform for small enterprises to roll out multipoint conferencing services, we chose RADVISION to provide this expertise.”

“RADVISION is the pioneer of solutions for real-time video and data communication over packet networks, and VTEL has been deploying large-scale Internet Protocol (IP) videoconferencing networks since 1999. It was natural that our two companies would come together to develop the MCU VI,” said Yotam Raz, General Manager for U.S. Operations at RADVISION’s Networking Business Unit. “VTEL has been a reseller of RADVISION products for years, and we are delighted that VTEL came to us for the MCU VI.”

“Our customers asked us for an affordable MCU that was not tied to a particular vendor,” said Dan Nix, VTEL Executive Vice President. “The MCU VI is a stand-alone resource. That’s an important distinction between the MCU VI and an embedded MCU.”

an MCU that is embedded in an endpoint, whenever you want to use the MCU use that endpoint. Or, if that endpoint is being used, its embedded MCU is not used by anyone else. The MCU VI is an independent MCU that can connect any H.323 videoconferencing system on the network. It is really easy to start an ad hoc conference, or add other endpoints to a conference that's already going," explained VTEL.

VTEL will begin shipping the MCU VI in December through its worldwide network of added resellers.

About VTEL Products Corporation

Based in Austin, Texas, VTEL Products Corporation is a leading provider of video communication endpoints, video network management software, multi-point conferencing systems, and network access solutions to education, government and enterprise customers worldwide.
