Jabra PanaCast 4K 180° Camera
The stunning, natural-looking, wide-angle view captures everyone even in the smallest of rooms. Industry-leading field-of-view supports **social distance** in any meeting room

Jabra Speak 750 Speakerphone
Crystal-clear sound with full duplex audio for a more natural conversation. Bluetooth connectivity to PC, tablet or smartphone. Second 750 may be added by USB or Bluetooth to cover larger rooms

Jabra PanaCast 4K Video Camera

The Jabra PanaCast 4K panoramic camera is a powerful, next-generation video meeting room camera. Certified for MS Teams Rooms and Zoom Rooms, the camera is in use around the world solving many meeting room and classroom layout challenges with its class-leading horizontal angle-of-view of up to 180°

The PanaCast is the world's only camera array for conferencing. By using three high-resolution camera elements and stitching the video streams into one 4K (UHD) output, even very small rooms look crystal clear and natural to the far end.

- Stunning 4K video performance with pin-sharp, edge-to-edge focus
- Built-in twin microphones
- Intelligent Zoom (auto-framing) uses face-detection to ensure you are always in shot and optimally framed.
- Vivid HDR lighting compensation ensures that you get the best picture under widely varying lighting conditions (even if you can't avoid an outside window in the field of view)

Jabra Speak 750 Premium Speakerphone

Jabra's newest premium speakerphone. High-quality audio with Acoustic Echo Cancellation & Full Duplex audio. Bluetooth/USB connection

If you have the luxury of your own working space at home or in the office and you're not cool about looking like a Cyberman or a call centre operator on your video calls, the Jabra Speak 750 speakerphone is a much better answer.

Solid enough for professional use in the meeting room but light enough to carry in your briefcase, the Speak 750 is the ultimate, flexible audio tool for your conferences.

Recommended effective pick-up range is up to 2.3m (but not limited to). This would equate to 6-8 people in a standard meeting room layout. Room acoustics will generally limit range rather than microphone sensitivity. For larger rooms, a second Speak 750 may be added (again by Bluetooth or USB connection).

- Crystal clear, hands-free audio
- HD sound on both calls and music
- Full duplex audio removes voice clipping when both ends speak together
- USB and/or Bluetooth connection
- Connects to two Bluetooth devices simultaneously so you can switch seamlessly between computer and smartphone calls
- Rechargeable battery and smart carry-case for portable use
- Certified for MS Teams, VoIP and UC apps
- A second 750 may be added for larger rooms
